

Carburettor Jetting

7.4 GL "MD", "HU", "NC" engines

Distribution:

Date: 04-1998

Binder: C

Page: 1(1)

The carburetor main metering jets for the 7.4GL "MD," "HU," and "NC" models has been changed. The previous jets were #73 for the primary metering jets and #56 for the secondary metering jets. The new jetting specification is #73 for both primary and secondary metering jets.

All replacement carburetors ordered from Volvo Penta will have the new jet combination. When servicing original equipment carburetors, the jets should be changed to the new jetting combination. Please make a note in your workshop manuals.
