Gear Lube All Engines

Distribution: M Date: 02-2008 Binder: A, B, C,

It is essential that the correct oil is used in sterndrives for reliable operation. This offers increased service life.

Where engine oils can be used, we have noted this in the table below. The oil is the same as for the engine. This means the same oil as is recommended for each engine (petrol/gasoline) may also be used for the transmission.

<i>Drive</i>			
Model	Oil Grade/Recommendation	Part No. (North America)	Part No. (Outside NA)
SP Drive: 100B, 200, 250, 270, 275, 280, 285, 290, SP-A, SP-A1, SP-A2 ¹ , SP-C ¹	Same as for engine	–	–
DP Drive: 280, 290, DP-A, DP-A1	Mineral, API GL5 ² (SAE 80W/90)	1141676	1141637
DP-A2, DP-B, DP-B1, DP-C, DP-D, DP-E, DPX	Fully synthetic, API GL5	1141679	1141634
DP-S, DPS	Fully synthetic, API GL5	1141679	1141634
DPH, DPR, IPS	Fully synthetic, API GL5	1141679	1141634
DP-G	Fully synthetic, API GL5	1141666	1141666
SX	Fully synthetic, API GL5	1141679	1141634
XDP	Fully synthetic, API GL5	1141679	1141634

1. SP-A2 and SP-C may also be operated on fully synthetic, API GL5, except ratio 2.15:1.
2. **Note!** If the drive was manufactured before 1986, for a 30 or 40 engine, and has previously been operated with engine oil in the drive, engine oil should be used in future.
